A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 30 October 2007 has been entered.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 2, 4-6 and 10-60, for reasons of record previously applied to claims 1, 2, 4-6 and 10-59, are rejected under 35 U.S.C. 101 because the claimed invention lacks patentable utility. See paper no. 17, paragraph no. 3.

Claims , 2, 4-6 and 10-60, for reasons of record previously applied to claims 1, 2, 4-6 and 10-59, are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. See paper no. 17, paragraph no. 4.

Applicant's arguments filed 30 October 2007 have been fully considered but they are not persuasive.

Applicant argues that Dr. Rathke has misrepresented Applicant's mathematical equations. Rathke cites Applicant's article from *Int. J. Hydrogen Energy*, "The grand unification theory of classical quantum mechanics", for the classical wave equation. The equation as shown in Applicant's article and by Rathke differ only in the characters inside the parentheses after " $\rho$ ", Where Rathke uses " $x$ ", Applicant uses " $r$ ", " $\theta$ " and " $\varphi$ ", the two differing only in the choice of coordinate system.

Applicant argues that the "Committee" has created a "new patentability standard" of acceptance by the scientific community, which it has imposed upon the Applicant. The relevance of "known scientific principles" and "contemporary knowledge" are found in MPEP §2107.01 and §2107.02, and are thus not created by the Examiner or any "Committee".

Applicant repeats his argument that Lieb disproves Krieg. Lieb does not reject the Heisenberg uncertainty principle entirely, but instead differs with an argument that is often based thereon. See page 555, left column, first two paragraphs. He states that "Eq. (4)" (which is on page 554), from the Heisenberg uncertainty principle, is correct, but "it is a pale reflection of the power of the operator  $-\Delta$  to prevent collapse" (page 555, left column 4<sup>th</sup> paragraph). Lieb then offers the Sobolev inequality as a "better uncertainty principle". Nowhere, however, does Lieb ever allow for hydrogen atoms going below the conventionally known "ground state".
